YEAR:- 200
Week beginning:-

PEST CONTROL POINTS

Pest control points **must** be checked on a regular basis and this will vary according to the time of year.

During the summer months a monthly check will be adequate. During winter, when mice are more likely to seek shelter and food, control points should be checked weekly.

Control Point Location	Date	Signature	Results/action taken

☛ In the event of a problem being identified consult with the Environmental Health Officer for advice on how to deal with it. Doing nothing is not an option!!!
